PROJECTS

SIMPLE - FIGHTING GAME

HTML CSS JAVASCRIPT

Using classes and Event listeners, I made an simple Fighting Game where two players have control on attacking and healing which manipulates on DOM to display Results. Winner declaration is based on which player hits his/her opponent health to zero.

WEATHER APP

USING RAPID API

Made an weather app using weather API from Rapid API. It takes the user input from the Search bar and fetches from the API as a JSON and it displays

AUTOMATED TELLER MACHINE

Using Classes, I created a customer class which contains name and Default account balance for the new customers. when Users withdraw money, if condition will run to find if the customer has enough money to withdraw or not. If not it will alert customer as they have insufficient funds and advise them deposit.

YOUTUBE UI

NESTED FLEXBOX CONTAINERS

To familiarize CSS Flexbox , I made an simple Youtube- UI which contains three rows of nested flexbox which contains Video thumbnail, title and view counts, also created sidebar and navbar.
